

## **Executive Summary—Municipality of Strathroy-Caradoc**

### **Socio-Economic Factors**

Socio-economic indicators describe and quantify a municipality's wealth and economic conditions and provide insight into a municipality's collective ability to generate revenue relative to the municipality's demand for public services. An evaluation of socio-economic factors contributes to the development of sound financial policies. An examination of local economic and demographic characteristics can identify the following situations:

- Changes in the tax base as measured by population, property value, employment, or business activity
- A need to shift public service priorities because of demographic changes in the municipality
- A need to shift public policies because of changes in economic conditions

### **Financial Indicators**

The Municipal Financial Indicators section of the report includes a number of measures such as the financial position, operating surplus, asset consumption ratio, reserves, debt and taxes receivables.

**Key financial indicators** have been included to help evaluate each municipality's existing financial condition and to identify future challenges and opportunities. A number of Industry recognized indicators that are used by credit rating agencies and/or recommended by Government Finance Officers' Association (GFOA) and the Ministry of Municipal Affairs and Housing have been included. Indicators related to **Sustainability**, **Flexibility** and **Vulnerability** have been included. It should be noted that Water and Wastewater indicators have also been included in the Water/Wastewater section of the report.

The tables on the following page provide highlights from this section of the report.

### ***Analysis of Net Municipal Levy Per Capita and Per Assessment***

In order to better understand the relative tax position for a municipality, another measure that has been included in the study is a comparison of net municipal levies on a per capita and per \$100,000 basis. This measure indicates the total net municipal levy needed to provide services to the municipality. This analysis does not indicate value for money or the effectiveness in meeting community objectives. Net municipal expenditures per capita may vary as a result of:

- Different service levels
- Variations in the types of services
- Different methods of providing services
- Different residential/non-residential assessment composition
- Varying demand for services
- Locational factors
- Demographic differences
- Socio-economic differences
- Urban/rural composition differences
- User fee policies
- Age of infrastructure
- What is being collected from rates as opposed to property taxes

As such, this analysis is not an “apples to apples” comparison of services, but rather has been included to provide insight into the net cost of providing municipal services within each municipality. Further analysis would be required to determine the cause of the differences across each spending envelope and within each municipality. This analysis was completed using the most current information available - net municipal levies as per the 2020 municipal levy by-laws and the 2020 estimated populations.

2020	Strathroy-Caradoc	Total Survey Average	Southwest
Net Municipal Levy per Capita	\$ 1,274	\$ 1,661	\$ 1,646
Net Municipal Levy per \$100,000 Unweighted CVA	\$ 989	\$ 1,082	\$ 1,022

### ***User Fees***

A number of user fees have been included in the Study including the following:

2020 Fees	Strathroy-Caradoc	Total Survey Average	Southwest
Development Charges - Single Detached	\$ 23,039	\$ 37,789	\$ 23,063
Residential Building Permit Fee	\$ 2,078	\$ 2,348	\$ 2,108

### ***Comparison of Tax Ratios***

Tax ratios reflect how a property class tax rate compares to the residential rate. Changes in tax ratios affect the relative tax burden between classes of properties. Tax ratios can be used to prevent large shifts of the tax burden caused by relative changes in assessment among property classes as well as to lower the tax rates on a particular class or classes.

<b>2020 Tax Ratios</b>	<b>Strathroy-Caradoc</b>	<b>Total Survey Average</b>
Multi-Residential	1.7697	1.7603
Commercial (Residual)	1.1449	1.6747
Industrial (Residual)	1.7451	2.1610

### ***Taxes and Comparison of Relative Taxes***

The purpose of this section of the report is to undertake “like” property comparisons across each municipality and across various property types. In total there are 12 property types in the residential, multi-residential, commercial and industrial classes. There are many reasons for differences in relative tax burdens across municipalities and across property classes including, but not limited to:

- Differences in values of like properties
- Differences in the tax ratios and the use of optional classes
- Non-uniform education tax rates in the non-residential classes
- Level of service provided and the associated costs
- Extent to which a municipality employs user fees
- Access to other sources of revenues such as dividends from hydro utilities and casino revenues
